Webcast Objectives:

- Identify the multifactorial nature of PJK in adult spinal deformity and neuromuscular cases
- Recognize surgical factors involved in PJK prevention such as optimized alignment, instrumentation strategies, dynamic stabilization and ligamentous augmentation
- Recognize patient factors associated with PJK occurrence such as poor bone quality, frailty and poor soft tissue envelope
- Integrate pre-operative planning in order to minimize PJK occurrence in patient selection, surgical technique and approach

Saturday July 20, 2019

11:30-13:00  Session 13: Lunch with the Experts: PJK Prevention Strategies from the Experts: What is the Evidence?  
Auditorium  
*Moderators: Peter O. Newton, MD & Justin S. Smith, MD, PhD*

11:30-11:40  **Vertebral Body Augmentation with Cement**  
*Henry F.H. Halm, MD*

11:40-11:50  **Proximal Dynamic Stabilization**  
*Christopher I. Shaffrey, MD*

11:50-12:00  **Age-Adjusted Alignment Correction**  
*Han Jo Kim, MD*

12:00-12:15  Discussion

12:15-12:25  **Instrumentation at the UIV**  
*Munish C. Gupta, MD*

12:25-12:35  **Adhering to the GAP Score for PJK Prevention**  
*Ferran Pellisé, MD, PhD*

12:35-12:45  **PJK Prevention in Pediatric Neuromuscular Deformity**  
*Paul D. Sponseller, MD, MBA*

12:45-13:00  Discussion

13:00  Adjourn
